

TUPC Learning Commons Development

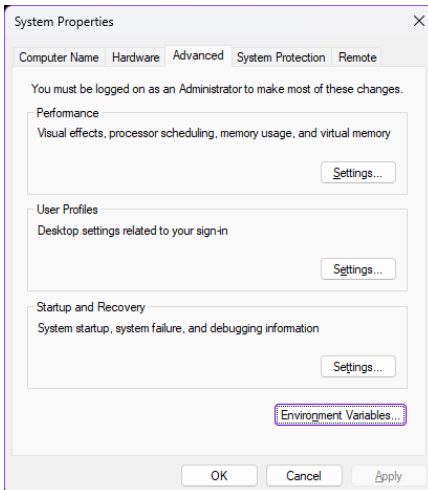

Environment Variable Setup Guide

Part 1: Setting up the Environment Variable

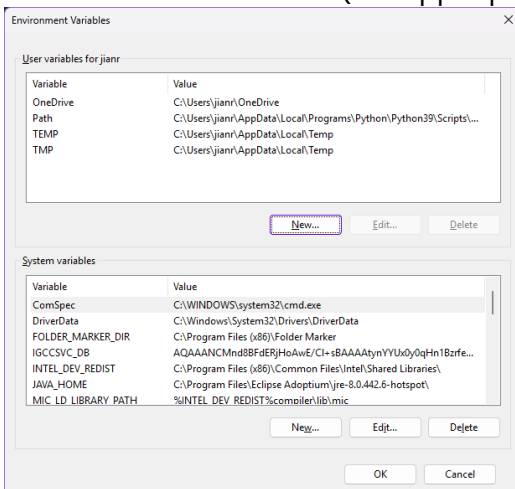

1. Go to the Start Menu or click the Search button.
2. Type "Environment Variables" and click "Edit the system environment variables".

3. Click the "Environment variables" button at the bottom part of the window.

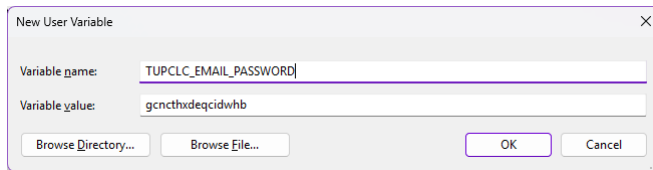

4. Under "User Variables" (the upper part of the window), click "New".

5. Input the following details:

Variable name: TUPCLC_EMAIL_PASSWORD

Variable value: gcncthxdeqcidwhb

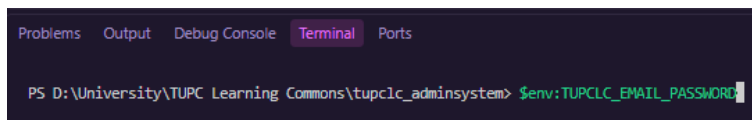

6. Click on OK and close the window.

Part 2: Verifying the Environment Variable

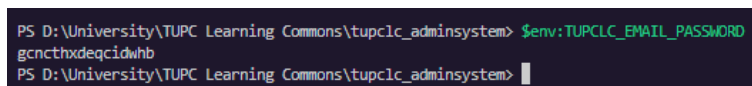

1. Open either Windows PowerShell or Visual Studio Code.

2. Type the following command:

```
$env:TUPCLC_EMAIL_PASSWORD
```

3. Press the enter key and it must display the variable value that you've set (in this case, the TUPCLC App Password).

Congratulations! You have successfully set up your Environment Variable. You may now proceed in testing the learning commons to make sure that everything is working including email confirmation functionality.
